

AUDIO

■ DESCRIPTION

A steering pad switch that operates the audio unit has been provided on the steering wheel of the new GS430. This steering pad switch, which contains frequently used audio switches, improves the ease of use of the audio unit.

This switch has a built-in ECU that transmits the operating conditions of the switch to the Gateway ECU via the BEAN (Body Electronics Area Network). The Gateway ECU converts these into the transmission signals for the AVC-LAN (Audio Visual Communication-Local Area Network, which are then output to the audio unit.
