

## DOOR LOCK CONTROL SYSTEM

### ■ DESCRIPTION

“Collision door lock release” functions have been added to the door lock control system of the new GS430/300 models for Europe. Furthermore, for improved theft deterrence, a double locking system is standard equipment on the RHD model for Europe and optional equipment on the LHD model for Europe.

### ■ Collision Door Lock Release Function

During a collision, when the Body ECU detects the signal that is output by the airbag sensor assembly, the Body ECU outputs a control signal to all the door ECUs to unlock their doors few seconds later. However, depending on the collision condition, there is a case where this function will not operate.
