

## SRS AIRBAG SYSTEM

### DESCRIPTION

- A curtain shield airbag has been adopted in the SRS (Supplementary Restraint System) of the new GS430/300. This curtain shield airbag operates under the same condition as the side airbag.
- A function that detects whether or not the front passenger seat is occupied and prohibits the deployment of the front passenger airbags (front, side, and curtain shield) if the seat is unoccupied, has been adopted in the SRS airbag system.
- The Airbag sensor assembly has been added to the BEAN (Body Electronics Area Network).
- The GS430/300 have adopted a fuel cut control that stops the fuel pump if the airbag has been deployed at the front or side collision.
