

Door unlock detection switch circuit

CIRCUIT DESCRIPTION

The door unlock detection switch is built in the door lock motor assembly. This switch is ON when the door lock knob is in the unlock position and OFF when the lock knob is in the lock position. The ECU detects the door lock knob conditions is this circuit. It is used as one of the operating conditions for the key confinement prevention function.

INSPECTION PROCEDURE

HINT:

In case of using the LEXUS hand-held tester, start the inspection from step 1 and in case of not using the LEXUS hand-held tester, start from step 2.

1 Check door unlock detection switch using LEXUS hand-held tester.

PREPARATION:

Connect the LEXUS hand-held tester to the DLC3.

CHECK:

Check the door unlock detection switch using DATA LIST.

OK

Proceed to next circuit inspection shown on problem symptom table. (See page DI-616)

NG

2 Check door unlock detection switch. (See page BE-148)

NG

Replace the door lock motor.

OK

3 Check wireharness and connector between door unlock detection switch and driver door ECU.

NG

Repair or replace wireharness or connector.

OK

Proceed to next circuit inspection shown on problem symptoms table. (See page DI-616)
