

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM INSPECTION

EC052-02

1. VISUALLY INSPECT LINES AND CONNECTIONS

Look for connections, sharp bends or damage.

2. VISUALLY INSPECT FUEL TANK

Look for deformation, cracks or fuel leakage.

3. VISUALLY INSPECT FUEL TANK CAP

Check if the cap and/or gasket are deformed or damaged.

If necessary, repair or replace the cap.

4. REMOVE CHARCOAL CANISTER

5. INSPECT CHARCOAL CANISTER

- (a) Visually check the charcoal canister for cracks or damage.

- (b) Inspect the charcoal canister operation.

- (1) While holding the drain port(s) closed, blow air (19.6 kPa, 0.2 kgf/cm², 2.8 psi) into the tank port and check that air flows from the purge port.

- (2) Blow air (19.6 kPa, 0.2 kgf/cm², 2.8 psi) into tank port and check that air flows without resistance from the other port.

- (3) Apply vacuum (9.8 kPa, 73.5 mmHg, 2.9 in. Hg) to tank port and check that the vacuum gauge indicator with settle at about 2.0 kPa (15.0 mmHg, 0.6 in. Hg).

If operation is not as specified, replace the charcoal canister.

- (c) Clean the filter in the canister.

Clean the filter by blowing 294 kPa (3 kgf/cm², 43 psi) of compressed air into tank port while holding purge port closed.

NOTICE:

- Do not attempt to wash the canister.
- No activated carbon should come out.

6. REINSTALL CHARCOAL CANISTER

7. REMOVE VSV FOR EVAP

8. INSPECT VSV FOR EVAP (See page FI-51)

9. REINSTALL VSV FOR EVAP
