

Rear Design

The rear end leaves a lasting impression on those who have been passed by the GS300.

- ① The quarter pillar structure of the new buttress (stepped pillar construction) creates the impression of a long cabin. The roof molding is connected from the front pillar to the quarter pillar, helping achieve stability in cross winds.
- ② The rounded surfaces produce a materialistic beauty peculiar to the car itself.
- ③ A distinctive three layer pattern in the rear lights identify this car, and the four independent rear lamps tighten up the look of the rear end.
- ④ The high performance dual exhaust pipes enhance the bold and sporty rear end and accentuate the distinctive rear bumper.

MO

The distinctive design of the new GS300 is recognizable at a glance from any angle. The new GS300 is in a class of its own. Its design hints at the refined taste of its owner.
