## Side Design

**A fluid design together with flush door section construction give the cabin and undercarriage an integrated appearance. An ultra long cabin conveys a high speed image.**

- ① The elongated flush door section was designed as a single unit up to the cabin.
- ② The long cabin utilizes an new elliptical window design.
- ③ The cladding panel strip is installed in a lower position to maintain a low center of gravity and to visually accentuate the long doors.
- ④ The letter "Z" painted on the side conveys a feeling of moving forward movement; a front wheel flare is also featured.
- ⑤ A shiny finish is applied in a semicircular pattern on the upper part of the front and rear wheel flares.
- ⑥ The low positioning of the rocker molding improves its aerodynamic properties and enhances the sporty feel.
