

■ MULTI DISPLAY

1. General

- The multi display has been provided on the center cluster panel as a standard only for Australia model. The display, which consists of a 7.0-inch wide LCD (Liquid Crystal Display) screen with a pressure sensitive touch panel, offers improved ease of use.
- The following pieces of information appear on the multi display: navigation screen display, trip information display, audio screen display, on-screen display, adjustment screen display, calendar display, and diagnosis screen display.
- Through the use of the GPS (Global Positioning System) and map data in a DVD (Digital Versatile Disc), this navigation system analyzes the position of the vehicle and indicates that position on the map that is displayed on the screen. Additionally, it provides voice instructions to guide the driver through the route to reach the destination that has been selected.
- The same navigation screen display function that is used on the current LS430 has been adopted. For details on this function, refer to the LEXUS LS430 New Car Features (Pub. No. NCF194E).
