

3. Switch

Switch	Function
MODE	<ul style="list-style-type: none"> Pressing MODE switch changes the contents of the multi-information display in the following sequence: <div data-bbox="669 352 1203 718" data-label="Diagram"> <pre> graph TD A[Average Vehicle Speed After Starting] --> B[Driven Distance After Starting] B --> C[Drivable Distance] C --> D[Average Fuel Consumption After Refueling] D --> E[Instant Fuel Consumption] E --> A </pre> </div> If the MODE switch is pressed 1.7 seconds or longer while the ignition switch is ON, the display changes into the display unit switching mode (by blinking the display unit). By pressing the RESET switch at this time, a display unit that matches the destination of the vehicle can be selected.
RESET	Pressing the RESET switch 0.8 seconds or longer resets the display contents of each mode.
